The invention relates to a purified P30 antigen (I) chosen from 3 fully defined Toxo30de13C, Toxo30de12C and Toxo330 MTX1 sequences, having 1-6 amino acids added to the C-terminus of the amino acid sequence of Toxo30de12C P30 antigen sequence, or comprising an amino acid sequence in which at least one of the five C-terminal cysteine amino acids of the amino acid sequence of Toxo30de13C P30 antigen sequence is substituted with alamine, or comprising the amino acid sequence chosen from MBP-CT Toxo30de13C(52-30daa), MBP-Toxo30de14C(52-294aa) and matabodies antibodies to Toxo30de14C(50) antibody complexes. The present sequence represents DNA encoding a MBP-Toxo930 fusion protein of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       à
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to a purified P30 antigen (I) chosen from 3 fully defined Toxo30del3C, Toxo30del2C and ToxoP30 MIXI sequences, having 1-6 anino acids added to the C-terminus of the amino acid sequence of Toxo30del2C P30 antigen sequence, or comprising an amino acid sequence in which at least one of the five C-terminal cysteine amino acid sequence in amino acid sequence of Toxo30del3C P30 antigen sequence is substituted which alanine, or comprising the amino acid sequence chosen from MBP-Toxo30del3C(52-30daa), MBP-Toxo30del4C(52-294aa) and MBP-Toxo30MIXI fusion proteins. (I) is useful for detecting the presence of IgM antibodies to Toxoplasma gondii in a test sample, which involves contacting the test sample suspected of containing the IgM antibodies with a composition comprising (I) and detecting the presence of (I)/IgM antibody complexes. The present sequence represents DNA encoding a MBP-Cov
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     GTCAATTCAGGGTGGTGAATGTGAAACCAGTAACGTTATACGATGTCGCAGAGTATGCCG 120

Total number of hits satisfying chosen parameters: 68479088
```

Minimum DB seq length: 0 Maximum DB seq length: 2000000000

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

E. coli Y1090 and phage DNA was purified from a liquid lysate. The CDNA inserts were gel purified after ECORI digestion and ligated into pBluescript SK+. Aliquots of the ligation were used to transform E. coli DHSalpha which were plated onto medium with X-gal for selection of recombinants."

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           /note=Tvector: pBluescript SK+; Site 1: EcoR1; Site 2: EcoR1; isolate: 2sp2; cDNA was prepared from polyA+enriched RNA The cDNA was ligated into Lambda gEl1 from Stratagene and packaged using Gigapack packaging extracts. An aliquot of the amplified library was used to transduce E. coli Y1090 and phage DNA was purified from a liquid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Colletotrichum trifolii

                                                                 surface seawater using a combination of differential filtration and density-dependent gradient centrifugation. Linker-amplified shotgun libraries were constructed by randomly shearing the total marine viral community DNA, end-repairing, ligating dsDNA linkers to the ends, and amplifying the fragments using Vent DNA polymerase. The resulting fragments were ligated into the pSMART vector and electroporated into MC12 cells (Lucigen; Middleton, WI)"

John Service seawater using a combination of differential filtration and density-dependent gradient centrifugation. Linker-amplified shotgun libraries were constructed by randomly shearing the total marine viral community DNA, end-repairing, ligating daDNA linkers to the ends, and amplifying the fragments using Vent DNA polymerase. The resulting fragments using Vent DNA polymerase. The resulting fragments were ligated into the pSWART vector and electroporated into MC12 cells (Lucigen; Middleton,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Viruses; environmental samples.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 14,
